

Poll Everywhere for PowerPoint

Download the integration to get started embedding activities directly into new or existing presentations

Get started at polleverywhere.com/app →

Ensure reliable, consistent, and secure presentations—all without leaving the new Poll Everywhere for PowerPoint app. Now, presenters can create, edit, and insert a preselected series of activities with one click. With Shared activities, stress less knowing that team members are presenting polished, updated templates.

Insert activities

- Create activities from directly within PowerPoint or via the web application.
- Choose from 10 customizable activity types that fit your unique presentation.
- Using Activity flows, there's no need to worry about hiding, locking, and finally revealing responses during your live presentation. We've done the work for you—with one click, insert three distinct views of your activity, each with its own unique response settings.

 *Inserting activities does not give Poll Everywhere access to other slides in the deck or to other materials.*

Standardize presentations

- Without leaving Poll Everywhere for PowerPoint, view the folders that have been shared with you.
- Select activities from shared folders and insert them into the deck.
- Any presenter may present and receive responses to shared activities, just as they would for an activity they create.

 *Maintain a single deck for all presenters – no copying necessary. Any edits made to a Shared activity will be immediately reflected in the presentation.*

Present live

- Empower your audience to engage in a two-way conversation.
- Allow participants to view live results within the presentation.
- Responding is easy with the devices audience members are already using.

 *Data is encrypted between audience devices, your presentation, and the cloud.*
